PROFESSIONAL SUMMARY

Senior cloud and platform engineer with 5 years building and operating enterprise Azure and Kubernetes platforms, including 4+ years on the same GM Financial platform across two consulting firms, where I progressed from junior to senior engineer in eighteen months. Built an internal developer platform adopted by 10 product teams that cut new API setup from two weeks to two days, and authored the Terraform module library that is now the organization's primary provisioning source across 10 Azure subscriptions. Trusted escalation point for severity 2 and 3 production incidents on a customer-facing financial platform handling payments, authentication, and vehicle financing. Currently completing an M.Sc. in Artificial Intelligence and Data Science, building agent-based LLM systems with RAG, LangChain, and LangGraph — bridging production-grade platform engineering with AI-ready infrastructure.

CORE SKILLS

- **Cloud & Platform:** Azure (AKS, App Services, APIM, Key Vault, Entra ID, Storage, Azure Monitor, Application Insights, Log Analytics), multi-subscription governance; familiarity with AWS (EC2, S3, IAM)
- **Kubernetes & Containers:** Kubernetes, Docker, Helm, Kustomize, Istio service mesh, Calico network policies, Ingress, private clusters, Argo Rollouts (blue-green, canary)
- **Infrastructure as Code:** Terraform (reusable modules, remote state, multi-environment, multi-subscription), Ansible
- **CI/CD & Developer Experience:** Azure DevOps, Azure Pipelines, GitHub Actions, Jenkins, Git, reusable pipeline templates, scaffolding automation, self-service onboarding, Playwright in pipelines
- **Security & Networking:** RBAC, IAM, Key Vault-backed secrets management, Prisma Cloud, Black Duck, network policies, DNS, load balancing, VPN, firewalls, private cluster networking
- **Observability & Reliability:** Splunk Cloud, Azure Monitor, Application Insights, New Relic, root cause analysis, incident response, on-call, SRE practices
- **AI / ML Engineering:** Agent workflows, RAG, vector databases, LangChain, LangGraph, OpenAI / Anthropic / Gemini APIs, locally hosted models, PyTorch, Keras, scikit-learn, Pandas, Flask model serving
- **Languages & Systems:** Python, Bash, PowerShell, Linux, Windows

PROFESSIONAL EXPERIENCE

Vrize — Senior Cloud / Platform Engineer (SRE)

September 2025 – Present | Remote | Client: GM Financial

- Build and extend a centralized CI/CD platform serving **8 product teams (~120 engineers)** and **32 microservices** across dev, QA, UAT, and production — contributing Helm onboarding, versioning strategy, automated deployment notifications, and Playwright test integration — **cutting new-service onboarding from two months to one**.
- Designed unified Splunk Cloud observability across **4 environments and 2 products**, replacing scattered per-service logging with end-to-end flow correlation that pinpoints the failing component and its position in the architecture, shortening diagnosis during incidents.
- Act as escalation point for **severity 2 and 3 production incidents**, owning diagnosis and documented root cause analysis across SQL timeouts, GraphQL failures, service connectivity, Key Vault access, and network policy misconfiguration, driving durable fixes with Microsoft and platform partners.
- Operate AKS environments with Istio service mesh, Calico network policies, Helm, and Azure DevOps pipelines, supporting secure and repeatable deployment automation across product teams.
- Support migration to **private AKS clusters**, hardening network boundaries, DNS, and ingress to meet enterprise security and governance requirements.

Perficient Latin America

July 2021 – September 2025 | Remote | Promoted from junior to senior engineer in eighteen months

Senior DevOps / Cloud Platform Engineer

January 2023 – September 2025 | Client: GM Financial

- Built an internal developer platform generating repository scaffolding, Azure DevOps pipelines, client-mandated .NET security libraries, Docker images, variable groups, and dynamic Azure integrations (Key Vault, Application Insights) — reducing initial setup of a new .NET

API from **two weeks to two days**, adopted by **10 teams across 20 services**, and later evolved into the organization's next-generation platform tooling.

- Authored **~20 reusable Terraform modules** spanning **10 Azure subscriptions** and one AKS cluster per environment; they remain the company's primary provisioning source for networking, identity, and workload standards.
- Introduced blue-green and canary deployments with Argo Rollouts, moving release validation out of a mandatory post-9 p.m. window into business hours on a secondary environment and enabling **zero-downtime cutovers with automated rollback**.
- Embedded security and supply-chain controls into pipelines (Prisma Cloud, Black Duck, Key Vault, RBAC) to support compliance and reduce vulnerability exposure.
- Trained and supported cross-functional engineering teams on CI/CD, Terraform, and Kubernetes, accelerating adoption of platform standards.

Mid DevOps Engineer

January 2022 – January 2023 | Client: GM Financial

- Designed and deployed cloud-native releases on Azure using Terraform, AKS, APIM, and Azure Pipelines, supporting consistent promotion from development to production for customer-facing account creation, payments, authentication, offers, and vehicle financing.
- Stood up centralized logging and monitoring with Application Insights and Log Analytics, improving incident triage, on-call response, and cross-team visibility.

Jr DevOps Engineer

July 2021 – January 2022 | Client: Safe Fleet

- Implemented synthetic monitoring with New Relic and Slack alerting across hybrid AWS and Azure environments, supported on-call production response, and automated disaster-recovery posture reporting with Python.

CIDEIM / Pontificia Universidad Javeriana Cali — Machine Learning Research Assistant

January 2020 – January 2022 | Cali, Colombia

- Built, evaluated, and served a supervised machine learning model achieving **92% accuracy** predicting treatment effectiveness for Cutaneous Leishmaniasis, using Python, scikit-learn, and Pandas, exposed through a Flask API.
- Co-authored a published research article on machine learning applied to healthcare; received the Excellence Award for the underlying undergraduate thesis.

APPLIED AI & MACHINE LEARNING PROJECTS

Graduate research and capstone work, M.Sc. in Artificial Intelligence and Data Science.

Agentic LLM System — RAG, Vector Database & LangGraph. Designed and built a multi-agent conversational platform over a public utility company's public information, answering service FAQs, maintenance schedules, news, and support channels. Implemented a web-scraping ingestion pipeline, retrieval-augmented generation over a vector database, and agent orchestration with LangChain and LangGraph. Routed requests across OpenAI, Anthropic, and Gemini APIs, delegating low-complexity tasks to locally hosted models to control inference cost. Integrated with WhatsApp messaging and OpenAI voice models.

Deep Learning & Computer Vision. Object detection, image classification, and segmentation models built, trained, and evaluated with Keras and PyTorch.

Applied Machine Learning. Supervised and unsupervised modeling with scikit-learn across multiple datasets, covering feature engineering, model selection, and evaluation.

EDUCATION

- **M.Sc. in Artificial Intelligence and Data Science** — Universidad Autónoma de Occidente, Cali, Colombia. Expected 2027. Focus on machine learning, deep learning, LLMs, agentic systems, and applied AI.
- **B.Sc. in Systems Engineering and Computer Science** — Pontificia Universidad Javeriana Cali, 2022. GPA 4.4 / 5.0. Excellence Award for Undergraduate Thesis.

CERTIFICATIONS & RECOGNITION

- Microsoft Certified: Azure Fundamentals (AZ-900) • Microsoft Certified: Azure AI Fundamentals (AI-900) • Product Practitioner (Perficient) • Leadership Fundamentals (Perficient)
- Co-author, published research article on machine learning applied to healthcare • Excellence Award, Undergraduate Thesis in Computer Science, Pontificia Universidad Javeriana Cali
